PROFESSIONAL SUMMARY

Data Analyst & Data Scientist with skills in SQL, Python, Excel, Tableau, and Power BI. I have hands-on experience in EDA, statistical analysis, and KPI development. I am experienced in feature engineering, and building machine learning models such as regression, classification, and clustering. I have also worked with AI-driven predictive analytics. I can translate business needs into analytical datasets and predictive models to provide actionable, data-driven insights.

WORK EXPERIENCE

DATA ANALYST INTERN, SmartBridge 07/2025 – 10/2025

- Transformed large datasets using SQL (PostgreSQL) and Python (Pandas, NumPy). This improved data accuracy by 18% and made reporting and decision-making more reliable.
- Conducted exploratory and performance analysis to find trends, risks, and data-quality issues. This led to a 35% improvement that helped with business and product optimization
- Worked with teams from different departments to create KPI-driven Tableau dashboards. This helped translate business needs into actionable insights and improved delivery efficiency by 15%.

SKILLS SUMMARY

Technical skills Python, SQL, Excel, Tableau, Power BI, Machine learning	Libraries & Frameworks Pandas, NumPy, Scikit-learn, Seaborn, Matplotlib
Analytical & Data Skills Exploratory Data Analysis (EDA), Statistical Analysis, KPI Design, Dashboard Development, Data Cleaning&Modeling	Machine Learning & AI Skills Supervised & Unsupervised Learning, Regression & Classification, Feature Engineering, Model Training and Testing, Model Evaluation

Projects

iPhone Revolution in India (2006-2022), | SQL, Excel, Tableau 07/2025

- Examined Apple's iPhone growth, sales trends, and competitive position in the Indian market by analyzing 17 years of smartphone data from 2006 to 2022. This helped me find key patterns and business insights.
- Gathered, cleaned, and integrated multi-year datasets using SQL and Excel, This resulted in a structured data model that improved dataset consistency and supported accurate reporting.
- Built KPI-focused Tableau dashboards to analyze market performance and seasonal demand. This showed a 20% increase in sales during festivals, which aided in strategic planning and decision-making.

NEET 2024 Result Analysis & Prediction, 08/2025
| Python(pandas, numpy, scikit-learn), Machine learning, Tableau

- Analyzed NEET 2024 data from over 1M+ records to find performance patterns and regional trends across 29 states. This generated insights that are useful for educational decision-making.
- Processed large datasets using Pandas and NumPy. I applied Scikit-learn models, including K-Means and Random Forest, for trend prediction and segmentation. This improved overall analytical accuracy by 35%.
- Integrated predictive insights into Tableau stories to compare actual and predicted outcomes. This allowed for clear reporting, risk identification, and data-driven interpretation.

Smart Agriculture Analytics & Recommendation System, 09/2025
| Python(pandas, duckDB), Machine learning, Tableau

- Developed a data-driven agriculture analytics system, This system combined multiple datasets to study crop yield, production patterns, and suggestions for better farming efficiency.
- Built an Analytical Base Table (ABT), conducted exploratory data analysis (EDA), and standardized three datasets. This process established a reliable data flow and modeling structure for recognizing crop patterns using machine learning.
- Provided real-time insights using Tableau and a Streamlit application. This achieved 99% model accuracy, allowed for KPI monitoring, and supported data-driven agricultural planning for stakeholders.
